ABSTRACT

The Survey of Institutional Characteristics of the Integrated Postsecondary Education Data System (IPEDS) collects the basic data that describe the universe of postsecondary institutions in the United States and its outlying areas. Data are collected annually on three different forms; appendix B of this documentation describes the use of these forms. The data from the 10,074 reporting schools are used for sample design and selection for other IPEDS studies and other postsecondary data collection activities. Data elements for the file include: (1) the name, address, and telephone number of each school; (2) numeric identifiers that can link this survey to other IPEDS surveys; (3) data pertaining to the highest level of programs offered; (4) data on institutional control; (5) school calendar system; (6) admissions requirements; (7) student services; and (8) student charges. Fall enrollment data were collected for some schools. The documentation for the data file includes a survey summary and file description, with two descriptive appendices. File codes are listed, and data element descriptions and alphabetic list of variables are included. Some general information on the IPEDS is also provided. (SLD)

PART I — SURVEY SUMMARY

A. TITLE

Institutional Characteristics Survey 1986-87

B. DESCRIPTION

The Survey of Institutional Characteristics for IPEDS collects the basic data that describe the universe of postsecondary institutions in the United States and its outlying areas. These data are collected on three different forms (IC1, IC2, IC3); see appendix B for usage of each of the three forms. The data are used for sample design and selection for the remaining IPEDS surveys and other postsecondary data collection activities. The data are extremely valuable for survey research design, statistical analysis and general information purposes. Also see Appendix A.

C. SURVEY METHODOLOGY Also see appendix B

1. UNIVERSE OR SAMPLE	2. RESPONDENTS	
IPEDS universe of 12,594	10,074 postsecondary education institutions in operation during 1986-87 responded	
3. DATE OF COVERAGE	4. FREQUENCY OF SURVEY	5. RESPONSE RATE
1986-87 academic year, or the period July 1, 1986 through June 30,1987	Annual	80.0%

6. HIGHLIGHTS

Data on three files (IC1, IC2, and IC3) include current responses for 2,107, 2,010, and 5,957 institutions respectively.

D. RELATED STUDIES

1. SURVEYS

A similar survey was conducted in the 1985-86 academic year. Related IPEDS surveys for the 1986-87 school year include Residence of First Time Students (IPEDS forms R1 and R2) and Fall Enrollment (IPEDS forms EF1, EF2 and EF3).

2. PUBLICATIONS

Publications planned include the Directory of Postsecondary Institutions, 1986-87 (expected Fall, 1987) and Student Charges and Institutional Characteristics (expected January, 1988).

5. RECORD COUNT
12,594 (including 231 in the outlying areas)

G. SEQUENCE
Unit ID

Appendix A- Abstract

The key data elements for the Institutional Characteristics survey (IC) file include the name, address and telephone number of each institution as well as numeric identifiers that can be used to link the data on this survey to the 1986-87 Fall Enrollment and Residence surveys. The UNITID was randomly assigned, and will not change from year to year. The FICE code is a unique identifier assigned by the Department of Education to colleges and universities to denote the universe of institutions accredited at the college level by an agency recognized by the Secretary of Education. It is useful for tracking this subset of IPEDS institutions through past and future data collection systems.

The data which pertain to the highest level of programs offered (e.g., Masters Degree, Associates Degree), and the institutional control (public, private nonprofit and private for profit) are used to determine which IPEDS surveys the institution is to receive.

Data were also collected on calendar system, admissions requirements, student services, and student charges. Fall enrollment data were also collected on the IC3 form, because only a sample of institutions receiving this form are included in the Fall Enrollment survey. Enrollment data for institutions receiving IC1 and IC2 forms are available on the Fall Enrollment data tape (forthcoming).

Appendix B- Survey Methodology

The Institutional Characteristics survey (IC) was mailed to 14,214 institutions. 3,015 received the IC1 survey (schools offering at least a four year baccalaureate degree); 2,719 received the IC2 survey (public schools offering awards in programs of less than 4 years duration; and private, nonprofit schools offering awards in programs of at least 2 but less than 4 years duration) and 8,480 received the IC3 survey (private, for profit schools offering awards of less than 4 years duration; and private, nonprofit schools offering awards of less than 2-years duration).

The forms were mailed out between November 25, 1986 and December 10, 1986. All survey respondents to the 1985-86 IC survey received forms with their prior year's responses filled in. This "shuttling" of data reduced respondent burden and enhanced processing procedures.

The survey results were processed from January 2, 1987 through May 15, 1987. During this time period 1,484 schools were deleted from the universe. (IC1(136), IC2(111), IC3(1,237)). The deletions (out-of-scope) were received formally through notification by IPEDS state coordinators or from follow-up telephone calls, and included schools that had closed or did not offer postsecondary programs. New schools were added to the files as they were identified.

The overall response rate was calculated as the ratio of the number of completed survey forms divided by the number of schools in the original universe minus the number discovered to be out-of-scope.

In order to compute the response rate for a particular item, it is necessary to consider all possible responses for that item. For example, in order to compute the percent of institutions responding to the item requesting information on the institution's calendar system, it is necessary to divide the number who had any calendar system response (source locations 2C1A through 2C1Z) on any form by the total number of forms returned.

Item nonresponse will vary because only a subset of data items were obtained from nearly 4,000 institutions via telephone interviews. The vast majority of institutions telephoned had received IC3 survey forms. The only items requested in the telephone interview were a verification of the name, address, control, and highest level of offering of the institution. (IC3 institutions were also asked for their total enrollment.) In addition, item nonresponse will vary because items included in last year's file were carried over to this year's except for information that might be expected to change from year to year such as tuition.

B. Background and Purpose of IPEDS

IPEDS will constitute the core of the CS postsecondary education data collection program and will help CS meet its mandate to report full and complete statistics on the condition of postsecondary education in the United States. IPEDS will provide data on a broad range of topics including postsecondary students, faculty and staff, programs, institutions, and finance. Information on each of these topics is needed and is of interest by itself. However, because IPEDS has been designed as an entire system with planned interrelationships among its various components, it will be possible to develop a more comprehensive perspective of postsecondary education than any single component could provide.

The development of IPEDS was undertaken to address technical problems within CS postsecondary education statistical program. Many institutions that provided a significant amount of postsecondary education and training were not surveyed by CS because they did not meet criteria for inclusion in any of CS existing postsecondary institutional universes or they had not been identified for data collection purposes. Moreover, data that were collected by CS postsecondary education surveys often could not be combined for analysis and reporting because they were collected for different time periods and employed different data elements and element definitions. Additionally, there was considerable overlap in institutional universes among CS postsecondary institutional surveys. (About 1700 "Regionally Accredited" institutions supplied information to both HEGIS and VEDS and 800 "State Approved" institutions provided data to VEDS and the Survey of Noncollegiate Schools with Occupational Programs.)

These problems severely limited the utility of CS postsecondary data. IPEDS addresses these problems. It is designed to collect accurate, reliable and timely data from the postsecondary institutional universe. It is based on the HEGIS model: institutional-level data that are submitted either directly to CS by the institution or through a central, State coordinating office(s). This level of aggregation will permit significant controls on data quality to be exercised by CS since CS will be the primary collector of data.

Design Features

IPEDS employs several new concepts in the collection of postsecondary institutional education data:

First, data element definitions that are both (1) relevant to all providers of postsecondary education and (2) consistent among components of the system have been formulated and tested.

Second, a set of data elements has been established to identify characteristics common to all providers of postsecondary education.

Third, specific data elements have been established to define the unique characteristics of various providers of postsecondary education.

Fourth, relationships and dependencies among the several components of IPEDS have been established to avoid duplicative reporting and enhance the policy relevance and analytic potential of the data.

Fifth, IPEDS has recognized the problems involved in trying to make inter-State and inter-institutional comparisons using CS postsecondary data and has addressed many of these problems through the use of clarifying questions - questions that ask what was or was not included in a reported count or total.

Finally, specialized but compatible reporting formats have been developed for different sectors of postsecondary education providers. In general, the reports developed for postsecondary institutions granting baccalaureate and higher degrees are the most extensive; forms for the 2-year, and less-than-2-year award granting sectors request less data. This design feature accommodates the varied operating characteristics, program offerings, and reporting capabilities which differentiate postsecondary institutional sectors while at the same time yielding comparable statistics for the same parameters for all postsecondary institutional sectors. Appendix C-1 contains a matrix identifying the particular forms each institutional sector would receive. In general, all 4- and 2-year schools and less than 2-year public schools will be surveyed on a universe basis, while private less than 2-year schools will be sampled. The system consists of several integrated components that will obtain and disseminate information on who provides postsecondary education (institutions), who participates in it and completes it (students), what programs are offered and what programs are completed, and the resources involved in the provision of institutionally based postsecondary education, both human resources and financial resources. Specifically, these components include:

Institutional Characteristics
Fall Enrollment (and Compliance Report)
Fall Enrollment in Occupationally Specific Programs
Residence and Migration
Total Institutional Activity
Completions (and Compliance Report)
Finance
Staff
Salaries of Full-Time Instructional Faculty
Libraries in Postsecondary Institutions

a. Institutional Characteristics (IC)

Institutional Characteristics data are the foundation of the entire IPEDS system. These data elements constitute the primary information that is necessary to interrelate and understand other descriptive kinds of statistical data about education, such as enrollments, staff, graduates, and finance.

The information is essential to:

1. establish the survey control file for IPEDS;

2. define parameters for establishing specific post-secondary institutional sectors (unique providers); and

3. develop data collection sampling frames.

The primary purpose of the Institutional Characteristics (IC) component of IPEDS is to collect basic data that describe the universe of postsecondary education institutions in the United States and its outlying areas. The resulting data file will be used as the survey control file for the entire IPEDS system, since it contains those characteristics of institutions required to efficiently conduct all other IPEDS components and to allow for meaningful tabular presentation and publication of final survey results. The IC survey is mailed in November each year, and the final version of the file, which should be available the following March or April, is used to mail the other IPEDS survey forms in the summer.

The system will be designed to generate the Institutional Characteristics survey as a turnaround document; that is, all information currently on file for any particular institution will be printed on the IC survey form and institutions will be requested to update this information on an annual basis. Institutions that are new to IPEDS will fill out a blank version of the survey document their first year and use the turnaround document in subsequent years.

b. Enrollment

Enrollment is probably the most basic parameter in postsecondary education since it indicates access to an educational experience that is both economically and socially advantageous. Because enrollment patterns differ greatly among the various types of postsecondary institutions, there is a need for both different measures of enrollment and several indicators of access. In IPEDS, enrollment is measured from four different perspectives.

(1) Fall Enrollment and Compliance Report(EF)

Fall enrollment is the traditional measure of student access to higher education and IPEDS continues this important statistical series. The Education Department uses its fall enrollment data in program planning and for setting funding allocation standards for legislatively controlled programs. The IPEDS 86 survey will request racial/ethnic data by sex and level of student. For 4-year institutions only, race data will be collected and tabulated biennially (even numbered years) for the Office for Civil Rights (OCR) for 10 selected fields of specialization. All other institutions will be requested to provide biennial race data at the summary level only; ie, by level and sex of student and not by field.

Beginning in 1987, IPEDS will collect, also on a biennial basis alternating with the collection of race data, fall enrollment by age of student. These data will offer insight into the relationship between the changing demographics of college-going cohorts and enrollment in different types of postsecondary institutions.

(2) Fall Enrollment in Occupationally-Specific Programs(EF)

These are data that will satisfy, for postsecondary vocational education, the Carl Perkins Vocational Education Act mandate that the GS collect data on vocational education students and programs. These data will also provide information on access to particular programs in vocational education, particularly "high-tech" programs and non-tracitional programs. Used in conjunction with completions data in occupationally-specific programs, it will be possible to compare distributions by sex and race/ethnicity of students who are enrolled in specific programs vs. the distribution of those who actually complete these programs. Total enrollment by program and by sex will be collected for the first time in IPEDS 87. Race/ethnic data collection will be added in 1988 to correspond to the compliance collection on the fall enrollment form.

(3) Residence and Migration(RM)

IPEDS 86 will also collect data on the enrollment of first-time students by State of residence including data on the number who graduated from high school the previous year. The primary purpose of this survey is to provide States with more complete information about the attendance of their residents in college than the States can provide with their own surveys. States can then use resulting data to make estimates about college going rates of its high school graduates, examine problems caused by excessive student out-migration or in-migration, and determine the types of institutions that attract their citizens into other States.

Handy for getting better response

Information about first-time freshmen who graduated from high school during the previous year is also requested on this report. These data will enable States to develop accurate college going rates. Comparisons by State will then be possible, and those States whose high school graduates go on to postsecondary education in significantly lower numbers will have information on which to base corrective action. This survey is planned for biennial collection.

(4) Total Institutional Activity(EA)

This survey covers a 12-month period and respondents are asked to provide data on two areas of interest.

Total Credit/Contact Hour: These data will be collected by CC for the first time in the second year of IPEDS (1987). This component was developed to serve several purposes. First, total credit/contact hours will provide a measure of institutional productivity relative to resource measures such as finance and staff. It will also permit the calculation of the number of full-time equivalent students (FTE's) on a consistent basis across institutions and institutional types. Data will be collected annually and institutions are asked to provide activity measures for the fall term and for the entire year.

12-Month Enrollment Count: Fall enrollment is a point-in-time measure of access and participation. For tracitional students enrolled in traditional postsecondary institutions, fall enrollment is probably a fairly accurate reflection of attendance. There is mounting evidence, however, that fewer and fewer postsecondary institutions fit a "tracitional" description in that many - i.e. most 2-year

schools and probably all less than two year schools-have a revolving enrollment policy that permits a student to register for a program at multiple points in an institution's academic year, not just in the fall. For these non-traditional schools, a fall count is not a sufficient measure of access and participation, since many students could enter a program after the fall and complete it before the next fall. To provide a valid perspective on less traditional schools, IPEDS is asking institutions to report an unduplicated count of students over a 12-month period. This portion of the survey will be collected biennially starting with IPEDS 87.

c. Completions(C)

Beginning with IPEDS 87, ES will collect information on the number of students who complete a postsecondary education program by the type of program, recognition (award), and race and sex of recipient. Completion data constitute the only national source of information on the availability and location of highly trained manpower. These data are used extensively by business and industry, the military, and other groups that need to recruit individuals with particular skills. These data will help satisfy the mandate in the Carl Perkins Vocational Education Act for information on completers of postsecondary vocational education. Race data will be requested on a biennial basis (alternating with fall and occupationally-specific enrollment).

labor use

c. Finance(F)

Finance data are needed for reporting and projecting the revenues and expenditures of a national activity representing a significant component of the GNP. Traditionally, knowledge of postsecondary education expenditures has been limited in scope to "higher education" institutions. IPEDS expands that scope to include all primary providers of postsecondary education. To enhance the comparability and utility of the finance data, IPEDS has made several improvements in financial reporting: (1) IPEDS is requesting information on expenditures by object (salaries, employee benefits, library acquisitions and utilities); (2) IPEDS is adding a series of clarifying questions to determine what is included/excluded from reported current fund expenditures; (3) IPEDS has added a section on expenditures for student scholarships and fellowships from Federal, State, local and institutional sources, and (4) IPEDS has separated appropriations for hospitals from appropriations for the educational institution. All of these improvements were effected while maintaining the continuity of data collected since 1975. This survey will be added to IPEDS in 1987.

e. Staff(S)

Through IPEDS and NCES' coordination with the Equal Employment Opportunity Commission, it will be possible for the first time to obtain and report a comprenensive picture of staff in postsecondary education - by their status - full or part-time and by the type of work they do. CS will use the totals of full and part-time staff from the EEO-6 form for institutions with 15 or more full-time employees and the IPEDS abbreviated staff form for smaller institutions to get an estimate of the total number of individuals employed in the postsecondary education sector. Collection of these data over a period of time will procuce insights into the use of part-time faculty and staff in postsecondary education. It will also allow comparisons of staffing patterns by institutional type and control and will permit relationships among financial resources and staff resources to be drawn. The contractor will work with EEOC (see Task 13.2) in order to process the EEO-6 data and will supplement the data base with the IPEDS staff data. These data will be collected bienially beginning in 1987.

14.2

f. Salaries of Full-Time Instructional Faculty(SA)

IPEDS will continue the collection of data on the salaries of full-time instructional faculty (as currently provided by HEGIS) in 1986. State agencies rely on staff, salary, tenure, and fringe benefits data to determine budgets for their State-supported institutions and to make comparative studies with other States.

response strategy

Institutions use salary and fringe benefits data to establish their own compensation packages. Institution officials study the compensation packages (salaries plus fringe benefits) offered by their peers and/or competitors prior to developing their salary and fringe benefits schedules.

g. Libraries in Postsecondary Institutions(L)

This component of IPEDS 87 will provide biennial data on the status of collections, circulation, salaries, staff and operating expenditures of libraries in postsecondary institutions.

There is a great need for valid and reliable statistics about libraries in postsecondary institutions to be collected and disseminated if the nation is to plan effectively for the development and use of these vast resources.

C. Interrelationship With Other CS Products, Agreements and Services

IPEDS has been in the developmental stage for over 3 years. As a result CS has developed various products, entered into agreements with other Federal agencies, and arranged for the delivery of various services. As we have neared IPEDS implementation, this process has accelerated, with several large scale projects currently in progress. Therefore, this contractor will have to coordinate his efforts with CS and several other Federal agenices, as well as use various products developed by CS, many through other contracts. In addition, the requirements of this contract call for the performance of several tasks that may require the use of subcontractors or other purchasing agreements. The implementation and coordination of the following products, services and agreements should be considered in the proposal:

1. IPEDS data processing system (C)

2. Less-than-two-year sample

3. HEGIS programs and data bases (C)

4. Agreement with EEOC (staff survey)

5. Agreement with OCR (fall enrollment and completions surveys)

6. Agreement with Bureau of Census (finance survey)

7. Early estimates sample and procedures (C)

8. Access to Xerox 9700 laser printer

9. Mailing services

Note. - (C) Indicates a contract currently in progress.
